

A CLOSER LOOK AT Ceramic Coatings

At a glance

Ceramic Coatings are the cheapest form of long term paint protection and are one of the best ways to always have the cleanest car on the road. They can also increase the resale value of the vehicle!

Our Coating Partner

IGL Coatings is a multi-award winning Malaysian Technology firm focused on developing innovative, disruptive and sustainable nanotechnology products. Redefining the protective coatings industry, IGL Coatings pioneered low and zero VOC Ceramic Coatings. Their mission is to continually create innovative products which are safe and outperform existing products in the market in terms of durability, quality and ease of application.

CHALLENGES

Vehicles nowadays have increasingly thinner and thinner paint, meaning every year, there is less clear coat protecting your car. UV Degradation, Road Debris, Harsh Climates, Bird Droppings, etc. These are all factors that cause damage to your vehicle and, with such thin clear coat, there is now less opportunity to correct this damage once it has occurred.

SOLUTIONS

Ceramic Coatings are a hardened polymer layer of protection that bonds to your vehicle's clear coat and hardens to form a protective shell that will last you many years! Comparing them to waxes that last 2-3 months, it's clear why Coatings are becoming so popular.

**Up to 10H
Hardness**

**Incredible
Slickness**

**Years of
Protection**

BENEFITS

1

Gloss & Clarity

A Ceramic Coating is going to add an incredible amount of gloss to paint. The depth and clarity it creates is unmatched, giving your vehicle that permanent "wet look"

2

Hydrophobic

The incredible slickness of a Ceramic Coating means that dirt and other contaminants won't want to stick to the paint and, when the time comes, they'll rinse right off

3

Marring Resistance

Due to its tough crystalline structure, a Coating will resist micro-marring caused by improper washing techniques far better than your soft factory clear coat
